# 100 billion investment in solar module projects

## Overview

---

Which countries need to invest in solar PV capacity additions?

While major developed regions have achieved maturity in terms of investment for solar PV capacity additions, developing and underdeveloped regions such as the Middle East and Africa and some countries in the Asia and Pacific shall require a substantial ramping up of investments.

Who contributes to solar energy financing?

Private actors have been the main contributors to solar energy financing; this is evident from the fact that the share of the private sector in the solar sector accounts for ~86% of total investments, with project developers occupying the major share of ~56%.

How much money have solar and storage companies made since IRA?

Since the Inflation Reduction Act (IRA) passed one year ago, U.S. solar and storage companies have announced over \$100 billion in private sector investments, according to new analysis released today by the Solar Energy Industries Association (SEIA).

Which countries invest in solar energy?

Within these regions, investments have been dominated by economies with a developed solar market, such as the United States of America, China, Vietnam, Japan, Spain, South Korea, Australia, Brazil, Germany, and India; these economies together accounted for 78% of the total solar investments.
