20W solar panel drives power

Application scenarios of energy storage battery products

Overview

A solar panel has numerous photovoltaic cells embedded in it. These PV cells are usually made up of silicon material. As the 20 watt solar panel receives the sunlight, the PV cells absorb the energy they rec.

How does a 20 watt solar panel work?

As the 20 watt solar panel receives the sunlight, the PV cells absorb the energy they receive. The cells transfer the energy absorbed by them to the semiconductor. It helps generate an electric field that produces voltage and current. Both voltage and current altogether deliver power. The power generated is measured in Watts.
