Are all black components more expensive

Overview

Why are PC components so expensive?

Mainly because these are the behind-the-scenes suppliers of the core bits and pieces hardware makers purchase. With these prices going up, laptop makers, graphics card manufacturers, and indeed all PC component producers will be paying more to make their goods, and naturally that cost will be passed on to consumers.

Are computer parts expensive Right Now?

There's no doubt that computer parts are expensive right now. However, it'll be a few months before the supply and demand balance changes, so be patient. In the meantime, keep checking for deals on computer parts to save money.

Why are modern CPUs & GPUs so expensive?

Modern CPUs and GPUs still have significant material and labor costs. The supply chain upon which PC hardware relies was substantially decreased due to the pandemic, which forced many employees throughout the globe to quarantine securely at home. The production, research & development of computer parts are complex and technological endeavors.

Why is the price of computer hardware higher than ever?

That's why the price of computer hardware is higher than ever right now. When demand increases while supply remains constant, prices tend to go up. This is the crucial implication here. Price increases occur when the supply of a product or service is reduced while the demand remains constant or increases.
