

# Are there 72 volt inverters

## Overview

---

Do I need a 12V or 48V inverter?

Simply put, if you have a 12V system, you need a 12V inverter; a 48V system requires a 48V inverter. Standard Pure Sine Wave inverters simply change DC power to AC power. Inverter Chargers handle this function plus allow you to charge your batteries off shore power or a generator. Renogy's 3500W Solar Inverter Charger is designed for a 48V system.

How do I choose a 12-volt inverter?

To choose a 12-volt inverter, add together the wattage of all the electronic devices and appliances being plugged in and select a suitable inverter. Remember, we offer Free Delivery on any 12-volt inverter when you spend over £50. We also stock 24v inverters; please click [here](#).

How many volts does an inverter use?

The paper work for inverter states the alarm should sound at 10.5v and should switch off at 9.5v. However using a kettle, which draws 8A+, has the battery voltage still at 11.2v and running the washing machine from shore supply it uses 9A maximum and will run on a B6 MCB without tripping it.

What is a 72 volt DC generator?

A 72 volt DC generator, also known as a 72 Vdc generator, is a type of generator that operates at 72 volts. These generators have several advantages over 24 or 48 Vdc systems, including faster charge time and fewer amp requirements for the same power output. They are commonly used in mobile applications and as backup for solar installations.
