Are there base stations for submarine communications

Overview

What is a submarine cable map?

Source submarinecablemap.com The Submarine Cable Map is an interactive map created by TeleGeography that illustrates the global network of undersea communication cables and their landing stations. These submarine cables are essential for international telecommunications, transmitting data across oceans to connect different continents.

How does the submarine communication system work?

The U.S. Navy's submarine communication system is a critical part of America's national security in that it allows the submarine fleet to remain at depth and speed and maintain its stealth while remaining in communication with the national command authority. Here's how it works.

How many submarine cable landing stations are there in China?

There are now the following submarine cables landing in Mainland China: The cables land at 9 submarine cable landing stations in China. China Telecom owns three cable landing stations, including Chongming Cable Landing Station for APCN-2, APG, China-US CN (retired), SWM3, TPE and NPC.

Where does submarine communication occur?

Submarine communications can occur on or near the ocean's surface with higher data rate systems such as satellite communications systems. The Northern Wisconsin area was selected as a location for the Navy's ELF facility because of its geology.
