Azerbaijani folding container three-phase hospital

Overview

How many container emergency living units were installed in Hatay?

Following the earthquake on February 6th, a total of 850 container emergency living units were installed in various regions of Hatay through various aid organizations, chambers of commerce, and representatives of the private sector.

What is a container hospital?

Container Hospitals are designed to adapt to changing terrain conditions and are constructed from durable materials. These containers can easily adapt to various climates and geographical regions. Additionally, they are specially arranged to carry out transportation and installation processes with maximum efficiency.

What is a prefabricated hospital structure?

Offering earthquake-resistant hospital structure and quick construction features, the prefabricated materials used in these structures are pre-galvanized steel, ensuring a hygienic hospital environment and meeting all necessary health and hygiene conditions seamlessly.
