# **Base station Huawei power cabinet**

## Overview

---

How much power does a Huawei base station use?

APM30+ RFC +TMC+BB,DRFU (S444)/ GRFU (S121212): 4-hour standby (184Ah) Description: The power consumption of the transmission cabinet is less than 200W. Huawei's fourth-generation base station includes: indoor macro base station BTS3900, outdoor macro base station BTS3900A, distributed base station DBS3900.

How Huawei is accelerating the digital transformation of base stations?

Huawei is accelerating the digital transformation of base stations by adopting AI and IoT. Harnessing these digital technologies, 5G Power optimizes coordinated scheduling between various systems, such as power supply modules, site hardware, and the network.

What is Huawei site power facility?

Huawei Site Power Facility offers energy-efficient, low-carbon power supply solutions, enabling carriers to build environmentally sustainable, resilient networks for modern telecommunications infrastructure.

How does Huawei's one site one cabinet work?

The upgraded site halves electricity fees and cuts O&M costs by 75%, and reduces carbon emissions by eight tons per year. Huawei's One Site One Cabinet solution replaces multiple traditional cabinets with a high-density, compact design, simplifying site management and reducing energy consumption for more sustainable operations.
