Base stations of operators in Bern

Overview

Mobile phones and other mobile devices require a network of base stations in order to function. The base station antennas transmit and receive RF (radio frequency) signals, or radio waves, to and from.

What is a base station in a telecommunications network?

A base station is a critical component in a telecommunications network. A fixed transceiver that acts as the central communication hub for one or more wireless mobile client devices. In the context of cellular networks, it facilitates wireless communication between mobile devices and the core network.

What services are available in Bern / Hauptbahnhof?

Flexible, no subscription and no basic fee. Equipment and mobility at the station. Equipment and lockers. Bike & car. Location.

What is a base station in a Wi-Fi network?

The base station in a Wi-Fi network is a device that connects to an internet service provider (ISP) and enables wireless communication between devices such as computers, smartphones, and tablets. It acts as a central hub for the network, transmitting and receiving data between the devices and the ISP.

Why is Bern station so disorientating?

A feature of Bern station is its long and curved gleis (platform/tracks), which for most of their length are under a concrete roof. The resulting lack of sight lines across the station can also be disorientating, particularly when two double deck trains are simultaneously occupying both sides of a platform. The BLS trains
