

Bernie New Energy Ultra-thin solar Glass

Overview

How efficient are CIGSe solar cells on ultrathin glass substrates?

Demonstrated flexible, Cd-free Cu (In,Ga)Se₂ solar cells on emerging ultrathin glass substrates. Achieved a record efficiency of 17.81 % for flexible, Cd-free Cu (In,Ga)Se₂ solar cells on ultrathin glass substrates. Achieved an efficiency of 10.11 % for 60 cm² large-area Cd-free CIGSe cells.

Can cadmium-free solar cells be used on ultra-thin glass?

The new cell concept was introduced in the study “ High-efficiency cadmium-free Cu (In,Ga)Se₂ flexible thin-film solar cells on ultra-thin glass as an emerging substrate,” published in the Journal of Alloys and Compounds.

What is Solar Photovoltaic Glass?

This article explores the classification and applications of solar photovoltaic glass. Photovoltaic glass substrates used in solar cells typically include ultra-thin glass, surface-coated glass, and low-iron (extra-clear) glass.

Can flexible ultra-thin glass be used for CIGSe solar cells?

However, flexible ultra-thin glass (UTG) substrate, an emerging material used in the display and touch panel industry, holds immense promise for the future of photovoltaics. UTG offers distinct advantages, making it a more suitable candidate for high-efficiency CIGSe solar cells.
