# **Blown fuse in circuit breaker in Uk**

## Overview

---

What is a blown fuse?

A blown fuse is a safety device that 'blows' when too much current is present in an electrical circuit. It stops the current flow, thus avoiding further damage. Reasons for this include: Knowing why a fuse 'blows' can help identify and sort out problems swiftly. Figuring out the cause of a blown fuse is really important!.

Why does a fuse blow a breaker?

A fuse is a very important part of your wiring. The fuse will blow or the breaker trip when either: • The circuit is overloaded so that it is trying to draw too much current. • There is a fault on the circuit probably creating a short (short circuit) caused possibly by the live touching neutral or earth wires, or possibly a fault on an appliance.

What happens if a fuse blows?

Fire hazards, broken equipment, and lost power are some possible consequences of a blown fuse. When a fuse blows, your options are: Ensure you have a new fuse with the same breaking capacity, type, amperage, and rating. Following electrical safety practices are also an essential part of learning how to replace a blown fuse.
