# **Can solar panels be cheaper**

## Overview

---

How much do solar panels cost?

The cost of solar panels has fallen by 99% since the 1970s, from about \$100 per watt (£77.09) to just under \$0.20 per watt (£0.15) today. Government incentives and policies have contributed to 60% of the overall decline in solar panel costs worldwide, with half of that coming from government-backed funding.

Why do solar panels cost so much in the UK?

Several key factors have impacted the cost of solar panels in the UK over the past ten years: Government incentives: As of 2019, the Feed in Tariff (which paid homeowners and businesses for generating renewable energy) ended. This resulted in a decrease in installation and, therefore, a decrease in overall cost.

Why are solar panels so expensive?

Solar panel prices have fallen by approximately 20% every time global capacity has doubled, following a trend known as Wright's Law. Solar panels can convert 22% of sunlight into electricity, whereas the first solar panels could only convert 1-2% into electricity. This has helped drive down costs as the panels are more efficient.

Is solar the cheapest form of energy?

The cost of turning sunlight into electricity has fallen more than 90 percent over the last decade. Solar is now the cheapest form of newly built energy generation. Job done?

Not quite. Right now, solar works well at cost-competitive prices and can help us cut emissions significantly.
