## Overview

---

What is a portable power station?

A solar generator is a portable power station that supports solar panel input. They are often used interchangeably, but not all power stations come with solar panels. How long does a portable power station last during an outage?

Run time depends on capacity and load.

What is the difference between a power station and a solar generator?

A portable power station is a battery-powered device that stores energy and provides AC and DC output. A solar generator is essentially the same thing, but includes or supports solar panels for off-grid recharging. Note: Not all power stations are solar generators, but all solar generators are power stations with solar capability.

Can a solar power station be used as a generator?

However, using one effectively is a little more complicated than many people realize. Technically, these units are electric power stations—giant battery packs, with the ports you need to plug in solar panels for charging. They can't actually harness solar power—and thus, act as a generator—unless you have both.

Do portable power stations work with solar panels?

Yes—many modern portable power stations are designed to work seamlessly with solar panels. In fact, using solar input is the most practical way to recharge your system during extended blackouts or when you're completely off-grid. The key is to match your power station's solar input specs (watts and volts) with compatible solar panels.
