**Communication 5g base station  
updated to sa**

## Overview

---

What is a standalone 5G network?

Standalone (SA): standalone networking. SA uses an end-to-end 5G network architecture, where 5G standards are used on terminals, base stations, and core networks. SA supports a variety of 5G new services, including eMBB, URLLC, and mMTC, and is applicable to the middle and later stages of 5G network construction. Routers support NSA and SA.

Is 5G SA the next strategic milestone?

As the industry evolves, the transition to 5G SA is emerging as the next strategic milestone to drive new business models, improve network efficiency and address next-generation use cases. [Link copied](#). Find out more about 5G in two phases: The transition from NSA to SA and its implications for the network, don't miss it.

Will China build a 5G base station next year?

Technicians from China Mobile check a 5G base station in Tongling, Anhui province. [Photo by Guo Shining/For China Daily] China aims to build over 4.5 million 5G base stations next year and give more policy as well as financial support to foster industries that can define the next decade, the country's top industry regulator said on Friday.

What is a 5G SA configuration?

In this regard, the 5G SA configuration features a fully independent 5G core network, which no longer requires a 4G connection to manage signalling. This enables advanced 5G features that facilitate the commercial launch of new use cases.
