# **Comparison of Off-Grid Solar Containerized Generators and Traditional Generators**

## Overview

---

Are photovoltaic panels suitable for off-grid systems?

Three off-grid systems have been proposed: (i) Photovoltaic (PV) systems with a diesel generator; (ii) Photovoltaic systems and battery storage; and (iii) Photovoltaic systems with diesel generator and battery storage. For this analysis, different size of photovoltaic panels were tested and the optimal size in each scenario was chosen.

Can renewable off-grid electricity supply be sustainable?

Renewable off-grid electricity supply is one alternative that has gained attention, especially with areas lacking a grid system. The aim of this paper is to present an optimal hybrid energy system to meet the electrical demand in a reliable and sustainable manner for an off-grid remote village, Gwakwani, in South Africa.

Is off-grid wind-PV-diesel-battery hybrid energy system feasible for remote areas?

An analyzed performance rate of off-grid wind-PV-diesel-battery hybrid energy system was feasible for remote areas of Selangor, Malaysia. The system design considers a load size profile of 33 kWh/day and peak load of 3.9 kW, net present economic costs, available energy sources and size, and CO<sub>2</sub> emissions.

Can a diesel generator run a PV system at the same time?

Once the diesel generator is running, there is no need to operate the PV system at the same time since the power will be dissipated. The diesel generator is running at full capacity at any time and its capacity is sized according to the demand which can easily meet the demand without PV system production.
