# **Distributed solar mandatory energy storage**

## Overview

---

Will this notice impact energy storage demand in the short term?

This Notice may impact energy storage demand in the short term. Up until 2024, mandatory storage allocation policies were always the primary driver of China's energy storage market. In 2024, for instance, energy storage installations tied to new energy projects accounted for nearly 40% of total capacity.

Are standalone energy storage projects economically viable?

With the cancellation of mandatory storage allocation, market attention has shifted to standalone energy storage. However, the economic viability of standalone projects remains under pressure. Historically, a major revenue source for standalone energy storage plants has been capacity leasing fees paid by projects coupled with new energy.

How will China's energy storage policy change in 2025?

The current Notice sets the framework for energy storage policy, while detailed rules will be made by each Chinese province based on local conditions by the end of 2025. This transition period may cause short-term market fluctuations, so industry players should stay flexible and prepared.

Will China's new energy storage installations reach 112 Gwh in 2025?

Based on current energy storage market and the Notice, InfoLink expects China's new energy storage installations to reach 112 GWh in 2025, up 9% YoY. But if local policies or incentives (e.g., capacity pricing or compensation for grid services) fall short, the industry may face some challenges in 2026-2027.

As a result, managing distributed energy storage resources has become critical for furthering distributed solar energy development. With grid ...

Since introduced in 2022, policy mandates requiring solar and wind energy projects to include energy storage systems have been crucial in the acceleration of storage ...

As a result, managing distributed energy storage resources has become critical for

furthering distributed solar energy development. With grid connection capacity for distributed solar ...

At present, the domestic energy storage market is mainly dominated by distribution and storage demand, and the release of the new policy for new energy power generation to ...

Imagine being forced to buy a bicycle with training wheels every time you wanted to ride - that's essentially what China's renewable energy sector endured with mandatory energy ...

Pairing distributed renewable energy with energy storage plays a crucial role in achieving China's dual-carbon goals, balancing power supply and demand while enhancing ...

The management measures also stipulate that general commercial and industrial distributed PV systems with a total installed capacity of up to 6MW can choose to use either the self ...

Introduction With the advancement of the "dual carbon" goals and the introduction of new energy allocation and storage policies in various regions, there is a need to further clarify ...

Our topical research on distributed solar and storage covers a broad range of subjects, including adoption and pricing dynamics, policy ...

In the context of accelerated transformation of the global energy structure, distributed photovoltaic storage solutions are becoming the core energy option for industrial ...

Up until 2024, mandatory storage allocation policies were always the primary driver of China's energy storage market. In 2024, for instance, energy storage installations tied to

...

Our topical research on distributed solar and storage covers a broad range of subjects, including adoption and pricing dynamics, policy and program evaluation, grid ...
