Do tool batteries require maintenance

Overview

How to maintain a power tool battery?

To maintain a power tool battery and get maximum performance: Fully charge and then fully discharge the battery at least once every two to three weeks, except for Li-Ion batteries which do not suffer from the memory effect. Prevent memory effect by following this routine.

How long should I charge a new power tool battery?

New power tool batteries generally arrive in a discharged state and should be charged for at least four hours before their first use. Keep your power tool battery cool, but do not put it in the refrigerator or freezer.

How often should you power cycle a power tool battery?

The power tool battery should be power cycled at least once a week to help prevent the occurrence of the damage. The battery should be utilized until it's fully drained and recharge it completely after use. The battery will be worthless if you don't make use of it for an extended period.

Why doesn't my power tool battery work?

Exceptions to the rule are Li-Ion batteries, which do not suffer from the memory effect. If your power tool battery doesn't work, maintain the batteries by keeping the contacts clean. Use a cotton swab and alcohol to clean dirty battery contacts. This helps maintain a good connection between the battery and the portable device. Exercise the battery.
