

# Dubai outdoor power bms system

Modular design,  
unlimited combinations in parallel

**BUILT-IN DUAL FIRE PROTECTION MODULE**

## Overview

---

Why should you choose BMS & Building automation systems in Dubai?

BMS and building automation systems in Dubai allow you to make your building more environmentally friendly by improving building efficiency and reducing energy waste. Buildings with limited environmental impact also increase in value and attract more occupants that are interested in renting or buying spaces within the building.

What is a typical building management system in Dubai?

Essential features of a typical building management system in Dubai include:

- Controlling and monitoring all electronic equipment in the building, such as doors, elevators, HVAC systems, and more.
- Automatic alarms that go off when a critical fault is detected within the building systems.

What is a building management system?

A building management system, also known as a building automation system, is the latest technological advancements that allow occupants of a building a greater level of control over the various operations and processes within the building.

What are the benefits of a BMS system?

A BMS or Bas system can also make the building more efficient by reducing energy consumption and the amount of money being spent on utility bills every month. By monitoring the building constantly, it is also easier to detect issues before they become major problems, thereby reducing building maintenance costs.
