East Asia Wind and Solar Energy Storage Project

Overview

Could Singapore sit at the 'core' of new energy grids in Southeast Asia?

Singapore could sit at the “core” of new regional electricity grids in Southeast Asia, with proposed interconnections to neighbouring countries set to bring 25GW of new renewable power and energy storage projects online. This is according to Rystad Energy, which published a report into Singapore’s role in the Southeast Asian energy mix this week.

Does Singapore have a role in Southeast Asian energy mix?

This is according to Rystad Energy, which published a report into Singapore’s role in the Southeast Asian energy mix this week. The report notes that Singapore already has hydropower and solar PV projects connected to Thailand and Laos, and that other connections have been proposed including other countries and technologies.

How many pumped storage facilities are there in China?

For China, this average is from 315 projects, far and away the highest number of pumped storage facilities recorded in the world. In September 2021, China’s National Energy Administration (NEA) released its “Mid-term and Long-term Development Plan for Pumped Storage Hydropower 2021-2035.” The official goal is to reach.

How much does a solar-plus-storage project cost?

For instance, the report notes that Malaysian and Indonesian solar-plus-storage projects have an LCOE ranging from US\$74-116/MWh and US\$91-144/MWh, for projects that can deliver 100% load factor. This compares to an LCOE of US\$135-170/MWh for combined-cycle gas turbine projects, with a 100% load factor, in operation in Singapore.
