# Energy storage investment in Ireland

## Overview

---

Does Ireland need more energy storage?

This study documents industry perspectives from Ireland, a country which requires a significant increase in the development of energy storage due to security of supply concerns, its isolation from Europe's central transmission network and its reliance on wind energy as a primary intermittent renewable energy resource.

When will long duration energy storage be available in Ireland?

The Irish Electricity Storage Policy Framework, published after this data was collected, indicates that an immediate route to market for 500 MW of long duration energy storage is currently being developed, with further studies planned to support long duration storage from 2030 to 2040 (Government Of Ireland 2024a).

What changes are needed to increase energy storage development in Ireland?

The focus group participants noted several key second stage policy areas that required changes in order to increase the amount of energy storage development in Ireland. These included legislative changes, adjustments to the planning approval process, the development of forecasting models, grid improvements and the introduction of targets.

What is energy storage Ireland 2025?

At Energy Storage Ireland 2025, the message was clear: energy storage is central to a stable, low-carbon grid, and while short-duration battery systems (BESS) are available, long-duration storage (LDES) supply is in its infancy, however ESN has a structure to enable LDES rollout in Ireland. The technology is advancing fast.

The Irish Electricity Storage Policy Framework, published after this data was collected, indicates that an immediate route to market for 500 MW of long duration energy storage is currently being developed, with further studies planned to support long duration storage from 2030 to 2040 (Government Of Ireland 2024a).

The focus group participants noted several key second stage policy areas that required changes in order to increase the amount of energy storage development in Ireland. These included legislative changes, adjustments to the planning approval process, the development of forecasting models, grid improvements and the introduction of targets.

At Energy Storage Ireland 2025, the message was clear: energy storage is central to a stable, low-carbon grid, and while short-duration battery systems (BESS) are available, long-duration storage (LDES) supply is in its infancy, however ESN has a structure to enable LDES rollout in Ireland. The technology is advancing fast.

The Electricity Storage Policy Framework presents 10 government actions to support the role of electricity storage systems in Ireland's energy transition, identifying the key ...

Ireland's energy storage capacity could increase almost eightfold by 2035, driven by a growing pipeline of battery projects and ...

Ireland's energy storage capacity could increase almost eightfold by 2035, driven by a

growing pipeline of battery projects and calls for stronger policy support, according to a ...

According to Energy Storage Ireland, 14% of all wind energy generated in Ireland last year was wasted due to lack of storage.

According to Energy Storage Ireland, 14% of all wind energy generated in Ireland last year was wasted due to lack of storage.

David Post, President of the European Association for Storage of Energy, highlighted the growing investment in energy storage across Europe: "We are witnessing ...

David Post, President of the European Association for Storage of Energy, highlighted the growing investment in energy storage across ...

Charged Horizons - Exploring the Energy Storage Landscape and Workforce Potential in Ireland December 2023 This report explores the investment and employment potential for the energy ...

The energy storage sector across Europe faces many financial, regulatory and policy barriers which has to date hindered development in many countries. This study ...

Ireland's market for battery energy storage (BESS) is likely to continue to decline after a brief ramp up around six years ago. Where developers once had a degree of certainty ...

Enabling high renewables generation Energy storage is the counterweight to intermittent renewable generation capacity, such as wind and solar power, and enables ...

At Energy Storage Ireland 2025, the message was clear: energy storage is central to a

stable, low-carbon grid.

TLDR: Ireland's energy storage capacity is set to skyrocket by 2035, with projections indicating an increase by eightfold. This growth could power every home in Ireland ...
