

# **Establishment of wind power solar container communication station legal procedures**

## Overview

---

How does a wind energy developer decide on a regulatory structure?

Long before a wind energy developer begins generating the first megawatt of power, the developer must decide on a regulatory structure for the project and negotiate and execute transmission and interconnection agreements. This chapter presents a general discussion of these issues.

Are wind generation companies regulated by FERC?

I. Regulatory Authorizations and Exemptions—MBRs, EWGs, and QFs. Wind generation companies selling wholesale power are “public utilities” under Part II of the Federal Power Act (“FPA”) and therefore subject to the Federal Energy Regulatory Commission’s (“FERC”) rate regulation, electric reliability rules, and other regulation.

How can China achieve a new energy supply-demand system?

To enable this growth, China is stepping up efforts to plan and construct a new energy supply-demand system based on large-scale wind and solar power bases, supported by clean and efficient energy-saving coal power around them, and enabled by ultra-high voltage power transmission lines. Location-tailored approaches are adopted.

Can a wind energy project be exempt from EWG & QF requirements?

However, most wind energy project companies obtain exemptions from these requirements, with the two most common exemptions occurring when a project owner obtains status as either an exempt wholesale generator (“EWG”) or a QF. Each of these categories is summarized below. A. Market-Based Rate Authorization.
