# Farm UPS Uninterruptible Power Supply

## Overview

---

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions.

How do I choose a reliable uninterruptible power supply (UPS) system?

When it comes to selecting a reliable Uninterruptible Power Supply (UPS) system, it's important to choose a trusted supplier. Unikeyic Electronics offers a wide range of high-quality UPS systems that cater to various industries, ensuring that your critical equipment is always protected.

Why do data centers need uninterruptible power systems (UPS)?

Uninterruptible Power Systems (UPS) are key feature of the Risk Management systems for Data Centers that ensure reliable power. No loss of data is a requirement. A critical failing of these UPS systems are the poor reliability of the batteries and thus batteries are a critical element in Risk Management.

What does a ups do if a power supply fails?

The system remains in standby mode, monitoring the main power supply. When it detects a power failure, the UPS switches to backup power from the battery within milliseconds. Best For: Low-power applications, such as home computers, gaming systems, small office equipment, and personal devices.
