What is a pure sine wave inverter?

KISAE Pure Sine Wave (True Sine Wave) inverters offer the most reliable wave form available, providing power almost identical to utility power – no harmonic distortion, noise or excess heat. They are the preferred choice for powering ‘sensitive loads’ like onboard electronics and demanding motor loads.

Why do you need a sine wave inverter?

Most appliances in your home use AC power, so you need it to convert the DC power that solar panels produce to AC power. It also brings up the voltage to the grid level. A pure sine wave inverter also saves you money, as it’s much more efficient than the older, jagged wave inverters.

When do I need a pure sine wave inverter generator?

A pure sine wave inverter generator is necessary when you need to power sensitive electronics. Some examples include running laptops, desktop computers, gaming consoles, audio equipment, or medical devices that require a stable and clean power supply.

Which appliances need a pure sine wave inverter?

Some appliances also require a Pure Sine Wave to run properly, including: digital clocks, light dimmers, variable speed motors, battery chargers, and audio/visual equipment. Because of their higher qualities, Pure Sine Wave inverters represent a more expensive purchase choice.
