Hargeisa applies for EMS for base station room

Overview

Should EMS be compatible with a local hospital?

For EMS service, it may also be important to consult with the local hospital for compatibility between the department and hospitals to enhance the responsiveness of both facilities. If the station is permanently staffed, then station occupant comforts should be addressed.

How do fire and EMS Station personnel get contaminated?

Station personnel may be susceptible to food and waterborne-based infections through improper food storage and backflow from sewage systems. At the fire or EMS station, cross contamination may occur in laundry facilities, sewage systems, and outdoor operations involving training.

Are emergency services stations a fire hazard?

An emergency services station is one occupancy that should have no excuse to burn and should be constructed and maintained to make it practically immune to fire. In reality, fire stations are often just as susceptible to fires as other structures.

What is the planning phase of fire and emergency services facilities?

The planning phase of fire and emergency services facilities is a complicated task and requires close cooperation among all parties involved, particularly in the early stages when organizational station needs are identified. ¹ Station capabilities (see Figures 2.2a and 2.2b). ² Equipment (e.g., apparatus) accommodation. ³ Member safety and health.
