Do you need an uninterruptible power supply?

But precision electronics like computers, gaming consoles, Smart TVs, and external hard drives are at far greater risk of damage from power interruptions than many home appliances. An uninterruptible power supply (UPS) is one of the best ways to protect sensitive electronics like desktop computers from irretrievable data loss and permanent damage.

How does a UPS work?

In this diagram, the UPS unit serves as the central hub, receiving power from the input source and distributing it to connected devices while also providing battery backup in case of a power outage. Power input connections typically include an AC power cord that plugs into a standard wall outlet or a dedicated

power circuit.
