### What size inverter do I Need?

Inverters come in different sizes starting from as little as 125 watts. The typical inverter sizes used for residential and commercial applications are between 1 and 10kW with 3 and 5kW sizes being the most common. With such an array of options, how do you find the right size for you?

An inverter works best when close to its capacity.

### What are the different solar inverter sizes?

Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly. During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes.

### How much power does a 12V inverter use?

Standard 12v models top out around 3000w (24v/48v ~ 4000w). To proceed: Upgrade to a higher-voltage system (24 V/48 V) for a larger inverter. Consider a higher-voltage system for a bigger inverter. Pick your appliances. Use the dropdown to add common devices—or enter your own custom items.

### What size inverter do I need to run a fridge?

Typically, a 2000W inverter can handle a refrigerator along with a few other small appliances. However, it's best to check your specific fridge's wattage and add some buffer for the initial surge power.
