# How long can a portable 500w power supply last

## Overview

---

How long do portable power stations last?

Portable power stations typically last between 3 to 10 years. Their lifespan depends on usage, maintenance, and battery quality. These devices are becoming essential for outdoor adventures and emergency situations. They offer a reliable source of energy when traditional power sources aren't available. But many wonder about their longevity.

How long does a power supply last?

Standard power supplies are 25-35c quality supplies from folks like seasonic and such are rated for 40-50c if not higher, generally the components are of much higher quality, they can do 24/7 constant full load (at rated power) as long as temps are maintained for 3-7 years in alot of cases.

How long do uninterruptible power supplies last?

Most uninterruptible power supplies have a lifespan of around 3-5 years (which the warranty will normally cover) and after that they're toast. This lifespan can be even shorter if you use the battery backup frequently. You can buy replacement batteries direct from the manufacturer and replace them yourself, extending the lifespan of the product.

How much energy does a power station store?

This value tells you how much energy the power station can store and, consequently, how long it can power your devices. For instance, a 500Wh power station theoretically provides 500 watts of power for one hour, or 100 watts for five hours. However, real-world conditions like energy conversion losses can reduce this efficiency slightly.
