How long is the warranty period for Canberra s outdoor communication battery cabinet

Overview

How long does a battery last under warranty?

This defines the number of full charge/discharge cycles a battery can perform under warranty. A common figure is 6,000 cycles, which equates to about 16 years if used once per day. However, warranties usually end when either the cycle count or the years are reached — whichever is sooner.

3. Throughput Warranty.

What is a solar battery warranty?

A solar battery warranty is a manufacturer's promise that the battery will perform as expected for a certain number of years, cycles, or total energy throughput — whichever comes first. A good warranty helps reduce your financial risk by covering repair or replacement if the battery fails under normal usage.

What is a battery throughput warranty?

Throughput Warranty Throughput refers to the total amount of energy (in kWh or MWh) that the battery can process over its lifetime. For example, a 10kWh battery may be warranted for 30,000kWh (30MWh) of throughput.

What does a battery warranty cover?

A good warranty helps reduce your financial risk by covering repair or replacement if the battery fails under normal usage. But warranties differ widely in what they cover, how they're triggered, and what exclusions apply.
