# **How much electricity should I buy for camping solar container outdoor power**

## Overview

---

Can you bring solar panels camping?

Yes, you can bring solar panels camping with you. Solar energy has become significantly more affordable as a way to power your gear instead of bringing out propane tanks and expensive battery packs.

How much solar power do I need for camping?

To determine how much solar power you need for camping, consider the number of people and devices you'll be powering at your campsite. The wattage required depends on your specific needs, but typically, you shouldn't expect to need more than 20 to 25 watts.

How much solar power do you need for a camper battery?

A 300 amp-hour camper battery, for instance, would need around 300 watts of solar power. Also keep in mind that solar panels experience a 75-90% drop in efficiency on cloudy days, so it's good to have slightly more than you need when it comes to solar power (about a 20% cushion, if possible, to account for less-than-ideal conditions).

Do you need a portable power setup for a camping trip?

Whether you're heading out for a weekend in the woods or building a longer off-grid setup, having the right portable power setup can make or break your camping trip.

Yes, you can bring solar panels camping with you. Solar energy has become significantly more affordable as a way to power your gear instead of bringing out propane tanks and expensive battery packs.

To determine how much solar power you need for camping, consider the number of people and devices you'll be powering at your campsite. The wattage required depends on your specific needs, but typically, you shouldn't expect to need more than 20 to 25 watts.

A 300 amp-hour camper battery, for instance, would need around 300 watts of solar power. Also keep in mind that solar panels experience a 75-90% drop in efficiency on cloudy days, so it's good to have slightly more than you need when it comes to solar power (about a 20% cushion, if possible, to account for less-than-ideal conditions).

Whether you're heading out for a weekend in the woods or building a longer off-grid setup, having the right portable power setup can make or break your camping trip.

A 200W solar panel paired with a 500-1000Wh power station can keep a couple or small group going comfortably. It's overkill for light packers, but ideal for basecamp-style setups.

Unsure what size solar panel you need? Our simple guide calculates your energy needs, so you can choose between blankets or fixed panels, and extend your off-grid stays.

Use our Off-Grid Load Calculator to estimate daily power consumption for RVs, cabins, tiny homes, and solar-powered systems. Calculate energy needs, size your battery and solar ...
