# **Hungary Pécs solar roof sloping solar panels**

## Overview

---

Can photovoltaics be used in Hungary?

Hungary has experienced a remarkable boom in solar energy in recent years. It has been shown in both the private and industrial sectors how strong the potential of photovoltaics actually is in this country.

What are the challenges facing solar energy in Hungary?

Despite the dynamic growth, there are some challenges in Hungary that could make the further expansion of solar energy difficult. One of the biggest hurdles is network capacity. Network bottlenecks and limited connection options mean that many planned large-scale projects cannot currently be connected.

Is solar power a viable option in Hungary?

Solar power has unique potential in Hungary, where 1950 – 2150 sunny hours offer the potential for 1,200 kWh/m<sup>2</sup> per year, greater than numerous other European nations. Other renewable energy solutions, like hydroelectric power, are less viable in the area.

Will Hungary build a solar factory in Northern Hungary?

There are plans to open a factory dedicated to building solar panels in Northern Hungary, representing an investment of 18.9 billion forints (nearly 6,000,000 USD). This new rapid growth can be attributed to Hungary choosing to follow in the footsteps of the European Union, which hopes to have 30+ percent renewable energy by 2030.

Tiszaszolos Solar Park  
Pécs Solar Park  
Construction concluded at Tiszaszolos Solar Park in 2019. With nearly 40,000 solar panels, it has a capacity of 11.6 MW. It is near the village of Tiszaszolos, from which it takes its name. There is little information available on this small solar park, though many lovely aerial photos exist. See more on solar feeds
