# Introduction to installing solar panels on corporate roofs

- ✓ 100KW/174KWh
- ✓ Parallel up-to 3sets
- ✓ IP Grade 54
- ✓ EMS AND BMS

## Overview

---

Can solar panels be installed on a roof?

Installing solar panels on a roof is an excellent way to reduce energy costs, lower your carbon footprint, and increase your building's energy independence. Whether you're installing solar panels on a residential home, a commercial office building, or a manufacturing facility, the process is quite similar.

Should solar PV be installed on commercial roofs?

More than half of solar PV deployment is on commercial roofs. Installing solar PV on commercial roofs can make sound economic sense; it reduces carbon emissions, offsets the need to purchase peak time electricity from the grid, puts unused rooftop space to good use, and helps to insulate companies from future electricity price fluctuations.

Can installing solar PV be installed on commercial roof space?

There is no specific reference to the installation of solar PV. It is therefore good practice to insert any key additional terms that would be required from the installation of installing solar PV on commercial roof space: Lease duration Busi.

Can solar panels be installed on a south-facing roof?

Solar panels perform best when installed on south-facing roofs (in the Northern Hemisphere), but they can also work on east- or west-facing roofs. Check your roof's pitch and orientation to determine the best location for mounting solar panels on the roof.
