Inverter and PV Panel Lifespan

Overview

How long do solar panels and inverters last?

Understanding the lifespan of solar panels and inverters is key to planning your investment. While solar panels can last over 30 years, inverters usually require replacement after 15 years. With the right components, professional installation, and regular maintenance, your solar system can provide clean energy for decades.

How long do solar panels last?

String Inverters: Usually last 10 to 15 years and may require replacement during the lifespan of your solar system. Microinverters: These are installed on each panel and tend to last longer, often up to 25 years, matching the lifespan of the panels. Leading manufacturers like Enphase offer extended warranties of 25 years on their microinverters.

How long does an inverter last?

Lowering the operating temperature is an effective way to extend the inverter's lifespan. Relays: Their mechanical lifespan typically exceeds 1 million cycles, while the electrical lifespan can reach over 10,000 cycles. Cooling Fans: Fans are vulnerable components that may fail due to long-term operation.

Are solar inverters durable?

Although most modern solar inverters meet the IP65 protection rating, making them suitable for outdoor environments, harsh conditions can still accelerate aging and reduce lifespan. The following environmental factors significantly impact inverter durability:
