Investment in solar panels on rooftops in Poland

Overview

Will solar power be a good investment in Poland in 2025?

Thanks to additional government subsidies for small private PV systems and high electricity prices of over 30 eurocents per kilowatt hour for companies, investments in own electricity generation in both areas will become attractive in 2025. In September 2024 alone, PV systems with a total power of 363.53 megawatts were installed in Poland.

Why should you invest in photovoltaic panels in Poland?

Photovoltaics, like heat pumps, have become one of the fastest-growing energy sectors in Poland. Investing in photovoltaic panels is not only a way to save money but also to increase independence from rising electricity prices. By generating electricity from renewable energy sources, you can protect the environment while reducing your bills.

What are the prospects for photovoltaics in Poland?

The prospects for photovoltaics are very positive, especially in the commercial sector, which is largely due to the electricity pricing policy. While private households in Poland pay 0.22 euros per kilowatt hour, the electricity price for commercial enterprises is 0.39 euros per kilowatt hour.

When will Poland reach a 20 gigaWatt photovoltaic capacity?

Share of renewables in the energy mix in Poland from 1965 until 2023. Poland will reach an installed photovoltaic capacity of 20 gigawatts by the end of this year.
