Iran Pioneer Energy Site

Overview

What did Eslami say about Iran's nuclear technology development?

Eslami emphasised the significant progress in nuclear technology development despite numerous obstacles, particularly international efforts to block Iran's access to advanced technologies. These have included several direct attacks on its nuclear facilities that have been attributed to Israel.

Where can I find information about Iran's nuclear weapons program?

Details are in the Director-General's reports to the IAEA Board on the IAEA website. An IAEA report in November showed that Iran had, in a series of contraventions of its safeguards agreement over 22 years, systematically concealed its development of key techniques which are capable of use for nuclear weapons.

Why are Iran's nuclear facilities underground?

As a result of decades of sanctions and direct attacks on its nuclear programme, most of Iran's key nuclear facilities have been constructed deep underground. This is just one of the factors complicating any plan to attack these sites.

Does the IAEA know about Iran's nuclear program?

The IAEA stated clearly in November and since, that unless the Additional Protocol was ratified and in place it is not possible for the Agency to establish that undeclared nuclear materials and activities are absent. Its "knowledge about Iran's current nuclear program is diminishing".
