# **Is it safe to charge a solar outdoor power bank at home**

## Overview

---

Can you use a solar power bank while charging?

Although technically, you use your solar power bank while it's charging (in an emergency, for instance), this practice isn't recommended. Doing so frequently may result in your solar power bank not charging or charging erratically. When you do this, the power banks' battery is in line (or in series) with the gadget.

How many solar panels can a solar power bank charge?

Solar power banks are always able to be charged by two power sources. The amount of solar panels your solar power bank has is a good indicator of how efficient it will be charging in the sun. Let's say it only has one solar panel on the face of the power bank.

What happens if I use my phone while charging my solar power bank?

If you use your phone while charging your solar power bank, the battery will be in line (or in series) with the smartphone, causing a higher power draw. This leads to excessive heating which could damage your battery. It is not recommended to use your phone while charging, only do it if absolutely necessary.

Why is my solar power bank not charging?

Wrong or broken charger/power cable If you're trying to charge your solar power bank using a USB charger and it isn't charging, the issue might not be your power bank. It could instead be the charger or the cable. Make sure you're using the correct charger, one that delivers the proper voltage and current (as required by your solar power bank).
