# **Is it safe to lay solar panels on roofs**

## Overview

---

When installed correctly, solar panels do not damage roofs. In fact, they can provide added protection from UV rays, hail, and extreme weather. Can solar panels be installed on a roof?

Solar panels offer a sleek, attractive design that can be installed on any type of roof. Open tube panels prevent moisture build up, keeping the roof surface dry. If you live in a region that experiences heavy wind or snow, solar panels are even weather-tested to handle harsh conditions.

Do I need a structural assessment before installing solar panels?

Before mounting solar panels, your roof must undergo a thorough structural assessment. Solar panels and mounting equipment add approximately 3-4 pounds per square foot of additional load to your roof structure. Key evaluation factors include: If your roof needs replacement, complete this work before solar installation.

Are solar panels tacked on a sloped roof?

After all, neither has traditional solar panels tacked on the roof. But the semi-transparent skylights of the atrium and the shingles on the sloped roof are more than just protection from the elements — they're building-integrated photovoltaics (BIPV). That is, they're made of solar panels.

What is solar panel roof mounting?

Solar panel roof mounting is the process of securely attaching photovoltaic panels to your home's roof structure using specialized mounting systems. This critical installation step determines both the safety and performance of your solar energy system for decades to come.
