

# Is sodium-sulfur battery a flow battery

## Overview

---

Which battery energy storage system uses sodium sulfur vs flow batteries?

The analysis has shown that the largest battery energy storage systems use sodium-sulfur batteries, whereas the flow batteries and especially the vanadium redox flow batteries are used for smaller battery energy storage systems.

What is a sodium sulfur battery?

A sodium-sulfur battery is a type of molten metal battery constructed from sodium and sulfur, as illustrated in Fig. 5. This type of battery has a high energy density, high efficiency of charge/discharge (75–86%), long cycle life, and is fabricated from inexpensive materials .

Can aqueous sulfur-based redox flow batteries be commercialized?

Aqueous sulfur-based redox flow batteries (SRFBs) are promising candidates for large-scale energy storage, yet the gap between the required and currently achievable performance has plagued their practical applications. Here, we propose several engineering strategies towards SRFB commercialization.

What is a flow battery?

Flow batteries A flow battery is a form of rechargeable battery in which electrolyte containing one or more dissolved electro-active species flows through an electrochemical cell that converts chemical energy directly to electricity.
