Kabul energy storage product exports will be restricted

Overview

Should Afghanistan focus on renewables?

Focussing on renewables for domestic power generation, would ensure power generation and grid stability for its current and future energy needs, and would thus help Afghanistan achieve energy security.

Does Afghanistan have a lack of domestic energy?

Lack of domestic generation remains the key challenge for energy security and energy access in Afghanistan. Its 30% electrification rate ranks it in the lowest 5% in per capita energy consumption globally.

Is Afghanistan a good country for energy security and energy access?

Afghanistan is rich in energy resources, both fossil fuel based and renewables. However, it still depends heavily on imported electricity and fuels and has one of the lowest per capita consumption of electricity in the world. Lack of domestic generation remains the key challenge for energy security and energy access in Afghanistan.

What are the priority areas for low emission development in Afghanistan?

Development of renewable energy is also one of the priority areas for low emission development for Afghanistan (NAMA, 2015) particularly in the context of energy access to rural communities to think and act beyond lighting energy.
