Kiev solar glass factory

Overview

Will Ukraine build a float glass factory in Kyiv by 2028?

Ukraine is set to build a float glass manufacturing plant in the Kyiv region by 2028. The NovaSklo project aims to construct a large-scale float glass facility in Ukraine. The initiative aims to reduce Ukraine's dependence on imports and attract investment into the country's industrial development, even amid the ongoing war.

Why is glass manufacturing important in Ukraine?

Glass manufacturing is a critical sector within the processing industry, playing a strategic role in construction, industrial production, and the country's post-war recovery. The construction of this plant will create new jobs and attract additional investment into Ukraine's industrial sector.

How will novasklo impact Ukraine's glass industry?

Currently, Ukraine is entirely dependent on imported glass. NovaSklo will reduce reliance on foreign suppliers, making the domestic market more resilient and competitive," emphasized Olga Batova, CEO of investment company EFI Group.

How much glass does Ukraine use a year?

Before Russia's full-scale invasion, Ukraine consumed 32 million m² of glass annually. By 2023, this figure had dropped to 19.6 million m². NovaSklo's first production line will have an annual capacity of 25 million m² — less than pre-war demand.
