Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible Power Supply (UPS) | Schneider Electric Hong Kong, China. An Uninterruptible Power Supply system provides emergency power when the main source fails, using batteries to ensure a continuous supply. It conditions incoming power, protecting equipment from fluctuations. We offer various UPS power supply types for different needs.

How do I choose a reliable uninterruptible power supply (UPS) system?

When it comes to selecting a reliable Uninterruptible Power Supply (UPS) system, it's important to choose a trusted supplier. Unikeyic Electronics offers a wide range of high-quality UPS systems that cater to various industries, ensuring that your critical equipment is always protected.

What does a ups do if a power supply fails?

The system remains in standby mode, monitoring the main power supply. When it detects a power failure, the UPS switches to backup power from the battery within milliseconds. Best For: Low-power applications, such as home computers, gaming systems, small office equipment, and personal devices.

Why do we need uninterruptible power supplies?

However, during transmission and distribution, it is subject to voltage sags, spikes and outages that can disrupt computer operations, cause data loss and damage equipment. The uninterruptible power supplies protect the connected equipment from power problems and provide battery backup during power outages.
