## Overview

---

How will the global inverter market perform in 2025?

Following a challenging 2024, the global inverter market is expected to return to revenue growth, with total revenue estimated to reach just under \$20 billion in 2025.

Are string inverters worth it in 2025?

With higher power ratings, these string inverters will offer lower price per watt and save balance of system spend for solar systems due to lower cabling, installation, and operation and maintenance (O&M) costs due to fewer inverters used. The other technology to watch in 2025 is 2,000 volts (V).

Will inverter revenue rise in 2025?

However, European inverter revenue in 2025 will remain below 2023 levels as high levels of competition forces price reductions in the market. Elsewhere, revenue in the United States is forecast to rise by 16% in 2025 as the residential market recovers from a slowdown in demand and inventory oversupply.

When will string inverters be released?

Inverter manufacturers are expected to release new products in 2025 to drive costs down further. String inverters with power rating greater than 400 kW are likely to be released at major trade shows in 2025.
