# Mobile energy storage power station price

## Overview

---

What is the total system cost of mobile energy storage?

The total system cost of mobile energy storage is the same as that of fixed energy storage, including investment cost, operating cost, and recovery cost. Unlike mobile energy storage, which incurs transportation costs during energy transportation, fixed energy storage incurs line transportation costs during energy transportation.

What is mobile energy storage?

As a flexible energy storage solution, mobile energy storage also shows a trend of decreasing technical and economic parameters over time. Like fixed energy storage, the fixed operating costs, battery costs, and investment costs of mobile energy storage also decrease with the increase of years.

Should solar power stations be used for mobile energy storage?

Additionally, setting the solar power station as a supply point for batteries, and utilizing a combined wind and solar energy supply could further enhance the complementary use of these resources, benefiting mobile energy storage.

How much will mobile energy storage cost in 2050?

By 2050, the promotion of renewable energy in Northeast and North China is expected to reach 75% and 66%, respectively. At this time, the overall system cost of mobile energy storage will further increase to 1.42 CNY/kWh and 0.98 CNY/kWh.
