# **Monitoring Uninterruptible Power Supply in Gaborone**

## Overview

---

What is an uninterruptible power supply?

Every UPS has: The word "uninterruptible" means that the power supply will act quickly enough to prevent the gear from ever losing power when the main power source goes dark. This means that a UPS system must be capable of activating backup power within 25ms of a power loss. A UPS, which by its very nature is redundant.

What is ups monitoring?

UPS monitoring is the process of monitoring the different metrics of UPS devices in a network, including voltage, current, battery status, and charge, so they are always up, available, and working. Monitoring critical performance metrics is crucial for maintenance, uptime, and to upgrade your power system to handle extended outages.

Does remote monitoring need battery health management?

Your remote monitoring system must have adequate battery health management. After all, your remote monitoring should always be the last thing at any remote site to fail. An uninterruptible power supply (UPS), or unlimited power supply, is a backup power source that activates when the main source fails.

Can an ups be used as a backup power source?

If commercial power failures are most likely expected to be rare and brief, an UPS may be only a backup power source at a remote site. However, at least one diesel or propane generator is also present to provide backup power. Unfortunately, many network managers fail to properly monitor their UPS systems.
