Nanya Super Lithium Ion Capacitor Combination

✓ 50KW/100KWH

✓ HIGHER POWER OUTPUT
IN OFF-GRID MODE

✓ CONVENIENT OPERATION
& MAINTENANCE

✓ PRE-WIRED

Overview

What is a lithium ion capacitor?

Lithium-ion capacitors (LICs) consist of a capacitor-type cathode and a lithium-ion battery-type anode, incorporating the merits of both components. Well-known for their high energy density, superior power density, prolonged cycle life, and commendable safety attributes, LICs have attracted enormous interest in recent years.

What is a supercapacitor & lithium-ion battery consortium?

The consortium's approach hinged on two pillars: a software toolbox and a physical demonstrator. The software toolbox was designed to determine the most cost-effective and long-lasting combination of supercapacitors and lithium-ion batteries for any given application and operational scenario.

Are supercapacitors better than lithium-ion batteries?

For this reason, supercapacitors excel in delivering quick bursts of energy, making them ideal for applications requiring immediate power delivery, such as power grid stabilization or regenerative braking systems in vehicles. Lithium-ion batteries, on the other hand, operate on a chemical principle.

What is the energy density of Li-ion hybrid supercapacitor (LIC)?

Using LTO/GF as anode, Li-ion hybrid supercapacitor (LIC) had been assembled with activated carbon as cathode. This LIC showed energy density of 46 and 26 Wh/kg with power densities of 625 and 2500 W/kg, respectively.
