New Energy Battery Cabinet Fan Test

Overview

How does a battery room ventilation system work?

The battery room has a separate ventilation system, see Figure 7, Figure 8, and Figure 9. During normal operation, ventilation fans draw air from the ventilated parking garage to ensure sufficient air exchange in the battery compartment for cooling purpose. The fans are equipped with fire dampers connected to the fire alarm system.

Do existing battery rooms have ventilation vulnerabilities?

A case study involving six existing battery rooms has been performed to investigate design vulnerabilities and identify knowledge gaps with respect to ventilation and other active fire protection measures. Results from the mapping indicate large differences in the design of ventilation systems and strategies implemented in existing battery rooms.

What are the NFPA guidelines for battery rooms containing Lib?

In addition, the international NFPA guidelines recommends that battery rooms containing LIB should be equipped with explosion prevention by deflagration described in NFPA 68 or by venting as a mechanical ventilation system as described in NFPA 69 .

Do battery rooms need ventilation?

Consequently, specific ventilation requirements are essential for battery rooms during overheating or fire [13–15]. Internal short circuits, chemical malfunctions, or Battery Management System (BMS) failures can ignite LIBs. The risk of internal fire initiation in virgin battery cells is approximately one in 10 million [16,17].
