## Overview

---

How much does a hybrid solar inverter cost?

Normal inverters can only convert solar DC power to AC for immediate use or grid export, while hybrid solar inverters provide energy management, including storage and backup capabilities. ~Rs. 81,000\* for a 3 kW hybrid solar inverter to ~Rs. 93,000\* for a 5 kW hybrid inverter. The higher the capacity of the inverter, the more expensive it is.

What is a hybrid solar inverter?

Normal inverters only use a battery and the grid, as they cannot work with solar panels or export power to the grid. On the other hand, hybrid solar inverters work in conjunction with solar panels, batteries, and the grid. They can power your home, charge the battery from solar or the grid, and, where allowed, send extra solar to the grid.

Why are hybrid solar inverters more reliable?

More power options in hybrid solar inverters makes them more reliable. Hybrid solar inverters, unlike normal inverters, offer significant savings through solar energy utilization. Since hybrid inverters integrate with solar, they help in clean energy generation that reduces carbon footprint.

Can a hybrid solar inverter charge batteries?

Needless to say, if your solar system doesn't generate enough power on some given day and the batteries require charging, a hybrid solar inverter can import AC power from the grid, convert it to DC power, and use it to charge the batteries.
