# **Nordic launch of power base station**

## Overview

---

How is the Nordic power system changing?

In the report we present our perspective on the overall trajectory of the Nordic power system, which is undergoing significant changes with the expansion of renewables, electrification and new industrial demand. This year's report reaffirms the Nordic TSOs commitment to do what we can to enable a successful transition.

Why do Nordic countries have a strong energy system?

The Nordic countries have a unique and long-standing cooperation in the energy field, and our power system is among one of the most integrated in the world. The sum of our different energy resources and comparative advantages constitutes a diversified and resilient Nordic system and makes our system stronger.

What is the largest battery in the Nordics?

Isbillen Power Reserve will be the largest battery in the Nordics. The 93.9 MW / 93.9 MWh lithium-ion battery will be located in the county of Västernorrland, approximately 100 km from Östersund and 6 km from Neoen's other Swedish battery, Storen Power Reserve (52 MW / 52 MWh), the construction of which is nearly completed.

When will a battery energy storage system be built in Sweden?

Construction has begun on Sweden's largest Battery Energy Storage System (BESS) undertaken by Neoen, an Independent Power Producer and Nidec, a system integrator. The project has been projected to come online in early 2025. Neoen is headquartered in Paris.
