Norway air energy storage project

Overview

How much CO2 can Norway Store a year?

Phase 1 of Norway's first carbon capture and storage project, which started operations in September 2024, can store 1.5 million tonnes of CO2 annually, equal to the emissions of about 750,000 cars annually.

How much does CO2 management cost in Norway?

The total estimated cost of the project, including ten years of operation, is around NOK 34 billion. The investment is backed by the Norwegian Parliament and aims to develop CO2 management as a cost-effective climate measure. 'This is an investment in future jobs, technology, and industry.

How much will Norway spend on the longship project?

While disclosing that its Longship project is nearing completion, the Norwegian government highlighted that it intends to continue its investment in the project, thus, it proposed an allocation of 2.1 billion NOK or \$197.3 million for this development in the state budget for 2025.

How important is Northern Lights in achieving Europe's net-zero emissions targets?

With the announcement of Phase 2 in March 2025, this capacity is expected to grow dramatically to increase storage to at least 5 million tonnes per year by 2028. This scalability highlights Northern Lights' importance in reaching Europe's net-zero emissions targets. The significance of the project goes beyond Norway.

This scalability highlights Northern Lights' importance in reaching Europe's net-zero emissions targets. The significance of the project goes beyond Norway.

The Northern Lights CO₂ receiving terminal in Øygarden, Norway. Image source: Northern Lights Climate tech innovator Phlair has ...

Equinor, Shell and TotalEnergies issue first CO₂ storage certificates to Northern Lights CCS project confirming storage in Aurora reservoir.

Norway is taking a historic step in the fight against climate change as the world's first full-scale value chain for carbon capture and storage (CCS) is now being launched. The

...

About Carbon Removal Carbon Removal is a Norwegian project development company for Direct Air Capture plants. The ambition of ...

Air could be the world's next battery Storing compressed air in sealed tunnels and mines could be a way of storing energy in the future - if an EU project in which Norway is a ...

Air could be the world's next battery Storing compressed air in sealed tunnels and mines could be a way of storing energy in the future - ...

Located in Norway, Northern Lights is the world's first CO2 transport and storage project open to industry, owned equally by ...

About Carbon Removal Carbon Removal is a Norwegian project development company for Direct Air Capture plants. The ambition of Carbon Removal is to scale the ...

Norway's first carbon capture and storage project-the Northern Lights project, is a ground-breaking step in the fight against ...

Norway's first carbon capture and storage project-the Northern Lights project, is a ground-breaking step in the fight against climate change. This enormous project, which has ...

Norway 60MW compressed air energy storage project The Project adopts a new generation of liquid compressed air energy storage technology to store electric energy in the form of ...

Ever wondered how a city known for fjords and northern lights is quietly becoming a global energy storage pioneer? The Oslo Grid Energy Storage Project is rewriting the

rules ...

The Norwegian government has made room in its 2025 budget for a multimillion-dollar investment destined to be injected into its carbon capture and storage (CCS) project, ...

Located in Norway, Northern Lights is the world's first CO2 transport and storage project open to industry, owned equally by TotalEnergies, Equinor and Shell. Operational ...

The Northern Lights CO2 receiving terminal in Øygarden, Norway. Image source: Northern Lights Climate tech innovator Phlair has signed an agreement with NorDAC Kollsnes ...
