Operational procedures for hanging solar energy storage cabinets

Overview

This Installation and Operation Manual contains important information, safety guidelines, detailed planning, and setup information for installation, as well as information about configuring, operating, and troubleshooting. How do I backhaul a solar monitoring system?

A reliable method to “backhaul” the data is required. Most connect to the internet via DSL, but be aware that many site owners will not allow the solar monitoring system to use the site network. This may require a separate internet connection and often requires cellular or satellite backhaul of the data to an operations center or user website.

What should NREL consider when testing energy storage systems?

Photo by Owen Roberts, NREL Considerations for energy storage system testing include the following. If cost-justified by a large purchase, consider qualification testing of battery systems. Include test conditions in specifications for battery O&M diagnostics and testing.

How do you decide if an energy storage system should be replaced?

Determine criteria to decide whether to repair or replace a component; criteria to decide whether to “cannibalize” a string of modules to source replacement modules or to order new parts; and criteria to decide if an energy storage system with declining energy storage capacity should be replaced.

How much does a solar energy storage system cost on Alcatraz Island?

The National Park Service budgets, ideally, \$100,000 per year for O&M of this PV energy storage system (308 kW PV; 1,920 kWh battery) on Alcatraz Island. Photo by Andy Walker, NREL Figure 13 shows the PV energy storage system on Alcatraz Island.
