PV Inverter and Gateway

Overview

What is a solar gateway & how does it work?

The gateway disconnects your home from the grid during an outage, protecting both your home and utility workers. Whereas other solar systems, simply supply an Emergency Power Supply limited by the size and capabilities of the installed Solar Inverter, a solar gateway offers full home back up for complete peace of mind and energy independence.

Does gateway support third-party inverters?

As tested by Sigenergy Labs, Gateway currently supports the following third-party inverters. Sigenergy Labs will be testing more third-party inverters and will keep this document up-to-date. Disclaimer: The information on this file is provided on an “as is” basis.

Are sigenergy solar gateways a good choice?

Sigenergy is currently the only brand offering such a broad selection of solar gateways, ensuring their system can meet a wide variety of backup power needs with reliable and scalable energy security. Works with diesel generators and Air Source Heat Pumps thanks to the integrated smart port.

Can a third-party inverter be connected to the SIGEN Energy Gateway homemax?

For the Sigen Energy Gateway HomeMax, if necessary, the third-party inverter can be connected to the smart load port, not the backup port, there is no communication between the Gateway and the third-party inverter, and the third-party inverter will be disconnected when it is off-grid.
