# **Peak regulation income of Praia Energy Storage Power Station**

## Overview

---

What is a clearing price of a province's power spot market?

The clearing price of a province's power spot market during trial operation is used as the basic data of the example to verify the operating income of the energy storage power station, which is helpful to improve the operating economy of the energy storage power station .

What is the relationship between re penetration and ES Power?

Relationship between the RE penetration, ES power, and confidence in satisfying. Energy storage (ES) can mitigate the pressure of peak shaving and frequency regulation in power systems with high penetration of renewable energy (RE) caused by uncertainty and inflexibility.

Do flexible resources support multi-timescale regulation of power systems?

Here, we focused on this subject while conducting our research. The multi-timescale regulation capability of the power system (peak and frequency regulation, etc.) is supported by flexible resources, whose capacity requirements depend on renewable energy sources and load power uncertainty characteristics.

What is the power and capacity of Es peaking demand?

Taking the 49.5% RE penetration system as an example, the power and capacity of the ES peaking demand at a 90% confidence level are 1358 MW and 4122 MWh, respectively, while the power and capacity of the ES frequency regulation demand are 478 MW and 47 MWh, respectively.
